

ABSTRACT OF THE DISCLOSURE

The present invention provides an electrically conductive member comprising a core and a resin layer provided on an outer peripheral surface of the core, wherein the resin layer is made of a resin composition in which an electrically conductive agent is dispersed, and the abrasion amount of the resin composition, measured by JIS K6902, is 20 mg or less. Moreover, the present invention provides a unit for cleaning an image holding member, a process cartridge, and an image forming apparatus each using the electrically conductive member.
